

ABSTRACT OF THE DISCLOSURE

Disclosed is a drum type washing machine having a gasket for preventing leakage of water in the tub and the laundry from being stuck in a laundry opening part. The present invention includes a cabinet having a first opening through which a laundry is put in at a cabinet front side wherein a door is installed to open/close the first opening, a tub installed in the cabinet to have a second opening at a tub front side corresponding to the first opening, a drum installed in the tub to have a third opening at a drum front side corresponding to the second opening, a rotation mans having a rotational shaft penetrating a rear side of the tub to be connected to the drum, and a gasket including a leakage preventing part having one end connected to a rim of the first opening and the other end connected to a rim of the second opening to prevent water leakage wherein a portion between the one and the other ends of the leakage preventing part is bent to prevent shocks by vibrations of the tub and drum from appearing on the cabinet and a laundry-stuck preventing part provided on an inner circumference of the leakage preventing part to prevent the laundry from being stuck in a space between the first and third openings.
